ANIMALS HATCHED FROM EGGS AND BORN ALIVE

Department of Education
BUREAU OF ELEMENTARY EDUCATION
2nd Floor Bonifacio Building
DepEd Complex, Meralco Avenue
Pasig City

Revised 2010

by the Learning Resource Management and Development System (LRMDS),
DepEd - Division of Negros Occidental
under the Strengthening the Implementation of Basic Education
in Selected Provinces in the Visayas (STRIVE).

Section 9 of Presidential Decree No. 49 provides:

“No copyright shall subsist in any work of the Government of the Republic of the Philippines. However, prior approval of the government agency or office wherein the work is created shall be necessary for exploitation of such work for profit.”

This material was originally produced by the Bureau of Elementary Education of the Department of Education, Republic of the Philippines.

This edition has been revised with permission for online distribution through the Learning Resource Management Development System (LRMDS) Portal (<http://lrmds.deped.gov.ph/>) under Project STRIVE for BESRA, a project supported by AusAID.

ANIMALS HATCHED FROM EGGS AND BORN ALIVE

At the end of this lesson, you will be able to:

- *Identify animals hatched from eggs and born as baby animals*

Good Day! Welcome once again. Take a deep breath and get going!

In this module, you will learn how animals reproduce their own kind.

Exploration Time

Activity 1

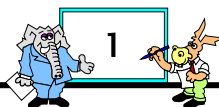

List down names of animals you see in your community. Do it in your notebook.

_____	_____	_____
_____	_____	_____
_____	_____	_____

- Have you seen these animals with their parent animals?

- Do young animals look like their parent animals?

- How do these animals increase in number?

Activity 2

Identify which among the following animals are hatched from eggs or born as baby animals. Write the names of the animals under the proper heading. Do it in your notebook.

spider	deer	rat	elephant
cats	cow	eagle	lizard
chicken	goat	whale	tikling bird
butterfly	duck	dog	ant
frog	mosquito	cockroach	carabao

Hatched from Eggs	Born Alive

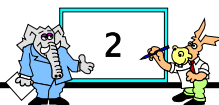

Read and Learn More:

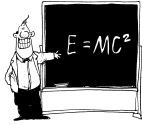

Animals like other living things reproduce their own kind. Reproduction is the process by which animals produce young animals of their own kind.

Animals that reproduce sexually have special organs called gonads, that produce sex cells called gametes. The process of fertilization is characterized by the joining of the female gametes – egg cells and male gametes – sperm cells in order to produce the young animals. The new organism that is formed after the fertilization of the ovum is called a zygote. Zygotes of placental animals develop internally in the female womb, and are born alive. Zygotes of egg producing animals, on the other hand, develop outside the female womb.

Dogs, cats, cows, horses and carabaos give birth to their young which developed inside their bodies. Some animals born as baby animals are fed by their parent animals soon after birth while others are left by their parents to find their own food.

Chickens, birds, snakes, turtles, crocodiles and lizards are animals that are hatched from eggs. However, there are fishes and snakes which are born alive and there are those that come from eggs. Shark, which is also a fish, either lays eggs or give birth to its young.

I learned that:

- Animals reproduce their own kind through the process of reproduction
- The union of the sperm cell and egg cell is called fertilization
- Some eggs are fertilized and developed inside the parent's body which others are fertilized outside the body.
- Some animals hatched from eggs; others are born as baby animals

Apply It

Why should we prohibit the hunting of birds or other animals? Write your answers in your notebook.

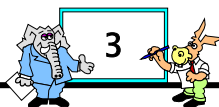

Test Yourself

Answer the following. Do it in your notbook.

A. List 5 animals that are hatched from eggs.

- 1.
- 2.
- 3.
- 4.
- 5.

List 5 animals that are born as baby animals.

- 1.
- 2.
- 3.
- 4.
- 5.

B. How do animals reproduce their own kind?

Congratulations !!! You finished all the activities in this module.
